Telecon with [REDACTED]

STATINTL

1. [REDACTED] will supply 1X, 2X and 4X objectives for the stereo- STATINTL
microscopic mode for this contract.
2. Investigation is being continued to change the working distance
to 2 inches for the lower power objective. This would reduce the
W.D. to approximately $\frac{1}{2}$ inch using the 4X objective. Parfocability
is also being investigated.
